**Experience**

Mr. Phil is a principal of Suburban Consulting Engineers, Inc. Mr. Phil has been actively involved in Civil Engineering since 1986. He has overviewed and designed a variety of engineering projects related to private land development and municipal improvements. Mr. Phil has appeared before various boards in Northern New Jersey providing professional testimony on residential, commercial and industrial projects. He is experienced in municipal engineering and currently is Borough Engineer for Mt. Arlington and has served as Planning Board and Board of Adjustment Consultant to several municipalities for site development and subdivision applications.

Mr. Phil has been responsible for providing construction managerial duties as well as practical design standards. He has been involved in the preparation of site development projects including subdivision/site plan layout configuration, grading design, stormwater management facilities, utilities design, sanitary sewer collection systems, individual subsurface disposal systems, structural design, forensic studies and roadway geometry. Mr. Phil has also acquired extensive experience in the design and construction of petroleum product storage and dispensing systems.

As Construction Manager, Mr. Phil has overviewed various phases of construction including municipal drainage and potable water network extensions, roadway construction, installation of individual subsurface sewage disposal systems, building construction and storage and petroleum product dispensing facilities.

Mr. Phil is Suburban Consulting Engineer's expert on regulations pertaining to underground and aboveground storage of Hazardous Substances. He has a thorough working knowledge of the continuously changing regulations for site remediation as well as a complete understanding of applicable government jurisdiction. He is actively involved in site assessments of subsurface impacts to soil and groundwater including field sampling, vapor monitoring and remediation procedures.
